**NO** / **OK**

Don't use cylinder without saddle. This will cause plunger to "mushroom". Saddle distribute load evenly on the plunger.

**NO** / **OK**
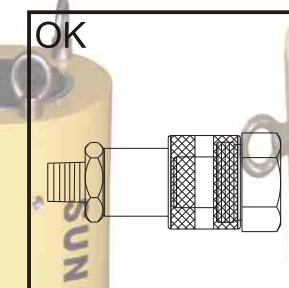

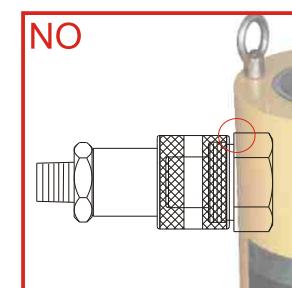

When making connections with quick couplers, make sure the couplings are fully engaged. Threaded connections such as fittings, gauges, etc.  must be securely tightened and leak free. Never use excessive tightening force that may distort the fittings or strip the thread profile.

**NO** / **OK**
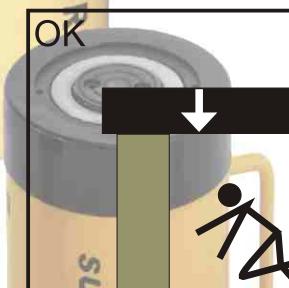

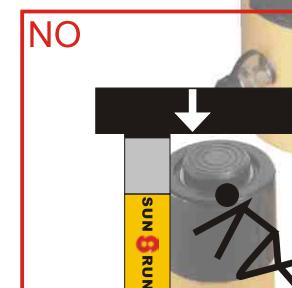

As with jacks, never place any part of your body under the load. Load must be on cribbing before venturing under.

**NO** / **OK**
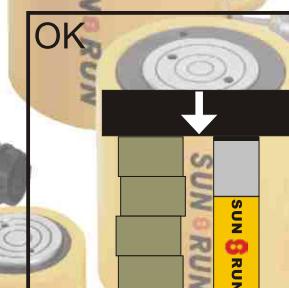

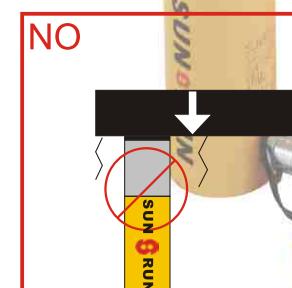

Place blocking or cribbing under the loads as you raise it. Each time you raise it higher, insert more blocking. Position yourself in a manner that will keep you clear of the load, and will not allow your hands or other body part between the load and the cribbing.

**NO** / **OK**
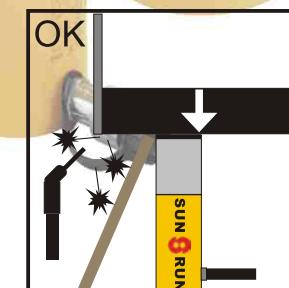

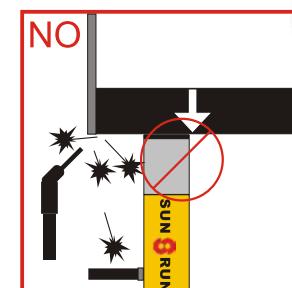

Weld splatter will damage plunger rods and hose. Hydraulic fluid can ignite if vaporized or exposed to high temperatures.

**NO** / **OK**
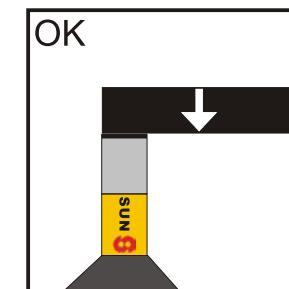

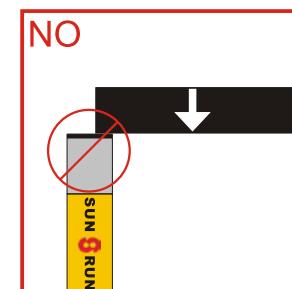

The load must be centered on the ram, or equally distributed on multiple rams. Off center loading can result in the ram slipping out and loss of the load.
